

Rash Enterprises is proud to introduce:

## HIGH-V-BARRIERS\*

This innovative product has many reusable applications for a multitude of locations such as: warehouses, convention halls, sporting events/arenas, traffic control and crowd segregation in the workplace. **HIGH-V-BARRIERS** can replace bicycle racks, orange construction cones, caution tape, saw horses and many other types of barriers. **HIGH-V-BARRIERS** can meet all your crowd control needs.

Our company has been in business over 25 years. The **HIGH-V-BARRIERS** product was “born” out of specific requirements from a national and international firm that has a need to control facilities traffic . . . both inside and outside their manufacturing firms. With thousands of employees working adjacent to dangerous equipment in various manufacturing and construction environments today, **HIGH-V-BARRIERS** help to provide workspace segregation.

Crowd Control &  
Workspace Barriers

# Crowd Control & Sporting Events

**HIGH-V-BARRIERS** can be used for crowd control in several

applications such as: school events, trade shows, college campuses, convention halls, etc. Their bright coloring make them clearly stand out in the hustle and bustle of a crowd and/or event.

**HIGH-V-BARRIERS** are extremely simple to assemble, set up, and disassemble. We also have special racks that work for both

storage and set up. When the need arises for a quick transformation in the landscape of your event, **HIGH-V-BARRIERS** makes the job easy!

Signage can be placed on barriers to direct traffic, provide instructions/information, etc. If your college, high school, theme park or other sports event requires crowd control barriers, we have what you need!

# Workspace Segregation

**HIGH-V-BARRIERS** are an essential tool that can be used in maintaining organization in the workplace. They can be used as partitions to help protect employees from hazardous areas.

**HIGH-V-BARRIERS** can be used for both indoor and outdoor workspaces, so

no one will be confused on what areas are "off limits".

These barriers can be used to segment the workspace, keep traffic away from specific

equipment/hazards, control of public access to work areas / construction areas, etc. Whatever your needs in the workplace, **HIGH-V-BARRIERS** can be used to fit your specific company requirements.

# Product Specifications & Other Uses

**HIGH-V-BARRIERS** are designed for rugged use in commercial and high traffic areas.

The barrier frames are made of 1 - 3/8" galvanized steel tubing bent and welded to the proper shape. Standard frames

are 10 ft. long and 42" or 50" high. However, barriers are available in customized sizes to meet your specific needs and can be anchored for additional stability.

**HIGH-V-BARRIERS** are mounted on movable steel plated stands which have a minimum base of 144 square inches (6" x 24"). This makes assembly and disassembly quick and easy.

Mesh made of high density polyethylene is stretched & tied to the barrier frames by cable ties made of tough, weather resistant nylon

with a minimum of 50 lb. tensile strength. Mesh comes in the standard orange color. Other colors of mesh are available, but minimum orders required.

**Sturdy & Lightweight!**  
(Each panel weighs approx. 15 lbs.)
